

Cutting tip Manufacturer in china--Ningbo Chilon import and export Co.,Ltd.

We professional production : Welding is the union of pieces of metal by fusing the opposing surfaces that have been made molten by heat. Processes similar to welding include brazing and soldering. Allied processes include the removal and cutting of metals. Common heat sources are the electric arc and oxy - gas flames. Gas welding/cutting entails heat being applied to the metal by the flame from a torch in which a gas, such as acetylene, is burnt with a supply of oxygen or air. CHILON offers high quality portable oxy fuel cutting machines designed for applications such as pipe cutting, beam cutting, circle cutting and shape profile cutting. Most of our portable equipment may be used for both oxy fuel bevel cutting and I cutting. Many of our customers affectionately call them a bug, because of their compact size, ability to carry heavy loads and some can even crawl vertically. Portable plasma cutting is also possible with select models.

Each portable cutting machine is designed to provide smooth high quality cuts using right cutting tips. Cuts done with a Chiloc portable make fit up better and prepare the surface properly for welding. Machines such as our IK-12 Max3 can perform a single pass double V-groove bevel cuts, saving time and money.
